

Extraction Lab Decision Tree

Decision-tree view of the biomass path from charge through extraction closeout

App checkpoint Critical control Manual / inferred Decision Handoff

Trunk: lot charge through primary recovery

Primary extraction controls

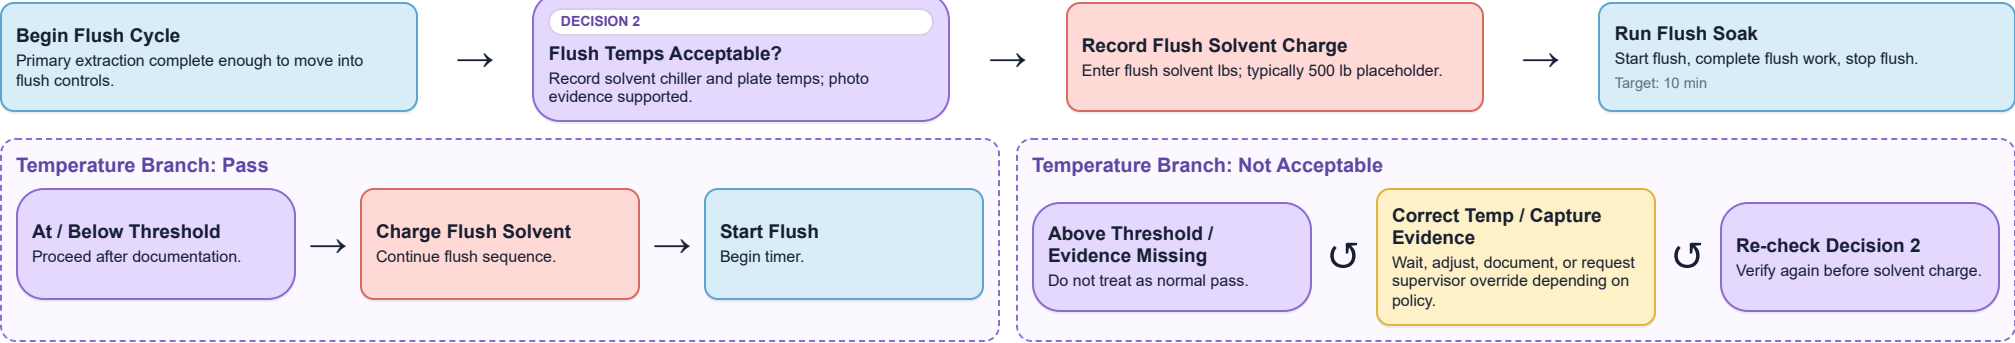

Style follows the referenced decision-flow pattern: a central process trunk, explicit decision nodes, and side branches for failed checks or rework loops. It is still based on this repo's implemented app flow and SOP alignment notes, not a copied template.

Decision Tree: Flush, Clarity, Shutdown, And Wet Output Handoff

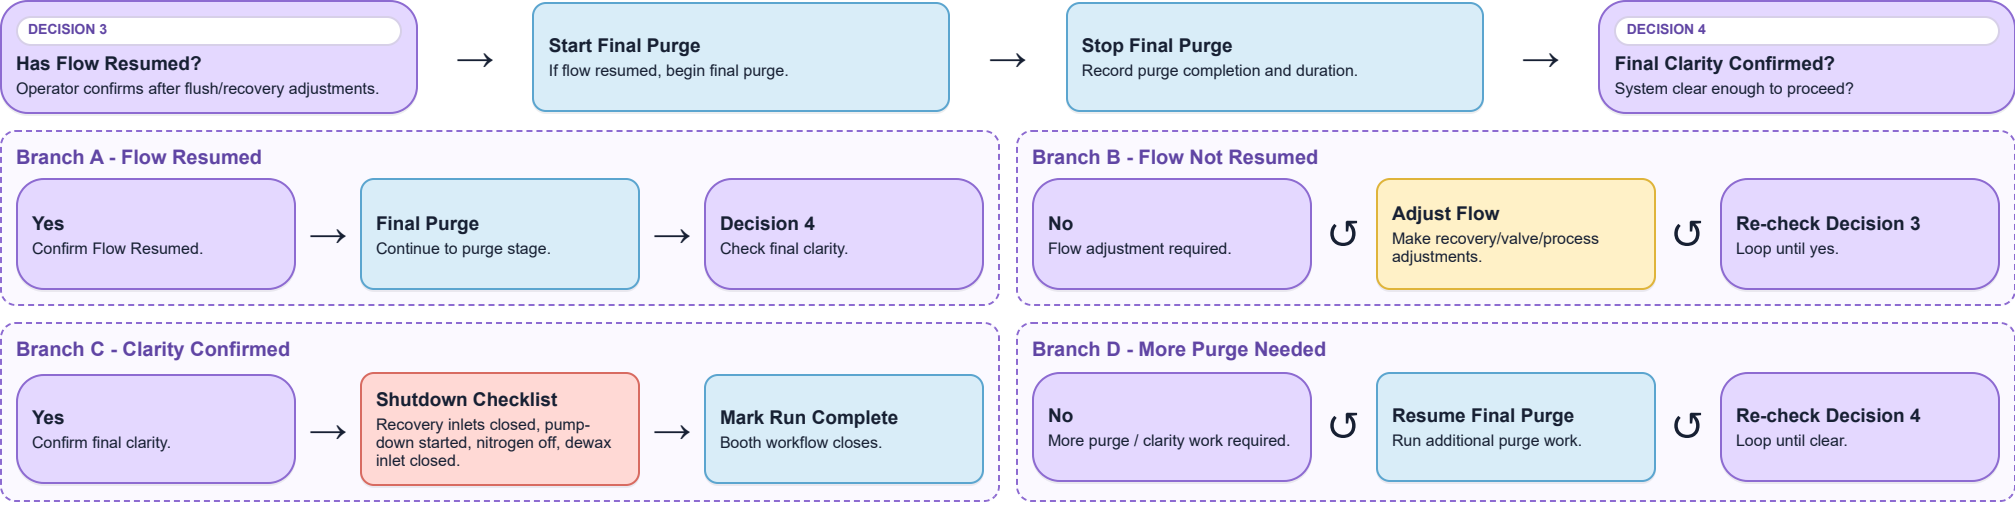

Branch labels match the operator-facing flow chart.

App checkpoint Critical control Manual / inferred Decision Handoff

Flush cycle setup

Flow and final clarity decisions

Wet output handoff
